

I am opposed to segmenting the 160M band in favor of CW/narrow band operations because;

1. There is significantly less CW/narrow band operation than other modes. The proposed segment far exceeds the utility factor of the band for CW/narrow band operation.

2. The proposed segmentation does not afford protection to users of other than CW/narrow band modes from interference.

3. Regulations currently exist relating to interference.

Opinion;

1. This proposal is simply a grab for spectrum by a sub group of licensees at the expense of others.

2. This proposal is not in the best interest of a growing amateur radio service.
